

SMART MACHINE COUNTING+PRINTING ON COMPONENTS REELS

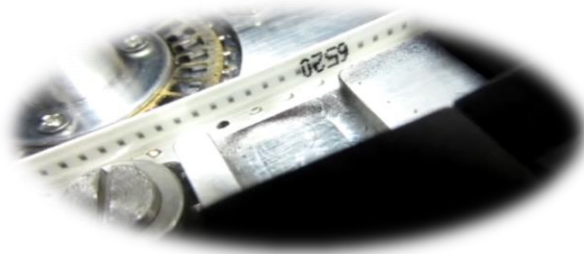

An exclusive and innovative development at Reel service Israel- A smart machine designed to count and print the quantity of components on reels.

Every each reel that was counted and printed by the machine gets an index and doesn't have to be counted again!!!!

The print speed is very high and it can print on any width and any size of reels without any limitation of the components amount in the reel.

The size of the machine enables its activating at a regular counting stand and also- there is an option to customize the machine according to the demand of the costumer.

The machine is currently displayed in our company. We recommend you make an appointment for demonstration and ability proof.

Advantages:

- * Financial saving, reduction of workers, significant deduction of counting hours. Each reel is counted only one time!!
- * Supervised and exact inventory- the print accuracy prevents human mistakes that can happen in a regular counting.
- * upgrade of the production output- The functions of the machine enables to divide reels according to the costumer's request.
- * Advertising- you can print the name of your company, websites,, et cetera.
